

Vitalis GMBH

Robotics

Internship

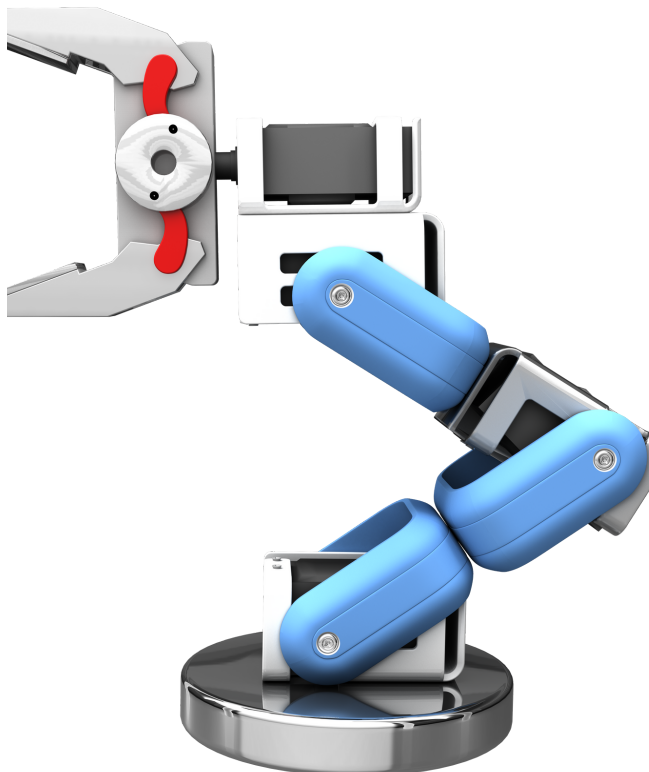

For students learning:

Mechatronics

Electronics

CNC - CAD

3D Printing

Learning outcomes

- Participants will learn to select tools and measuring instruments, taking into account the accuracy of machining of workpieces, use tools and measuring instruments for manual processing
- Participants will learn soldering of electronic parts and perform work in the field of manual and mechanical processing
- Participants will learn how to perform the wiring of various components according to technical diagrams
- Participants will learn how to write technical documentation of machines and equipment, define settings and parameters for the task
- Participants will learn how to design on 3D modelling software like CAD
- Participants will learn to disassemble equipment according to the technical documentation
- Participants will learn how to program a microcontroller
